Contents of Volume 109

Number 1, 7 July 1984

OSUJI, G. O., An Oscillatory Mechanism for the γ -Glutamyl Transpeptidase-mediated Translocation of Amino Acids across the Cell Membrane	1
KOSLOV, M. M. and MARKIN, V. S., A Theory of Osmotic Lysis of Lipid Vesicles	17
GOODWIN, B. C. and LACROIX, N. H. J., A Further Study of the Holoblastic Cleavage Field	41
KURGANOV, B. I., Binding of Specific Ligand by Linearly Associating Enzyme System	59
BRUNI, C., GANDOLFI, A. and GERMANI, A., Analysis of the Parameter Constraints for a Proposed Antibody Affinity Distribution	71
BROOKS, D. R., LEBLOND, P. H. and CUMMING, D. D., Information and Entropy in a Simple Evolution Model	77
ANNINOS, P. and KOKKINIDIS, M., A Neural Net Model for Multiple Memory Domains	95
AOKI, K., A Quantitative Genetic Model of Two-Policy Games between Relatives	111
STAUDTE, R. G., GUIGUET, M. and D'HOOGHE, M. C., Additive Models for Dependent Cell Populations	127
LAMBERT, D. M., Specific-Mate Recognition Systems, Phylogenies and Asymmetrical Evolution	147

Number 2, 21 July 1984

GROOME, L. J. and GROOME, S. D., Tension at the Heme: a Mathematical Treatment of Hemoglobin Cooperativity	157
HARA, T., A Stochastic Model and the Moment Dynamics of the Growth and Size Distribution in Plant Populations	173

REGEN, D. M., Myocardial Stress Equations: Fiberstresses of the Prolate Spheroid	191
OWEN, R. E. and OWEN, A. R. G., Mathematical Paradigms for Mimicry: Recurrent Sampling	217
AIHARA, K., MATSUMOTO, G. and IKEGAYA, Y., Periodic and Non-periodic Response of a Periodically Forced Hodgkin-Huxley Oscillator	249
ARMSTRONG, D. P., Why Don't Cellular Slime Molds Cheat?	271
NICHOL, L. W., SCULLEY, M. J., JEFFREY, P. D. and WINZOR, D. J., Indefinite Self-association of a Solute in Linear and Branched Arrays	285

Number 3, 7 August 1984

SHOAF, S. A., CONWAY, K. and HUNT, R. K., Application of Reaction-diffusion Models to Cell Patterning in <i>Xenopus</i> Retina. Initiation of Patterns and Their Biological Stability	299
FRASIER, C. C., An Explanation of the Relationships Between Mass, Metabolic Rate and Characteristic Skeletal Length for Birds and Mammals	331
YAMAMOTO, Y., MIOH, H. and SHIMIZU, H., A Kinetic Ising Model for Dynamical Behavior of Anisotropic System—Its Significance in Streaming Phenomena	373
VANDERMEER, J., Plant Competition and the Yield-Density Relationship	393
ZAMIR, M. and BIGELOW, D. C., Cost of Departure from Optimality in Arterial Branching	401
HALLAM, T. G. and DE LUNA, J. T., Effects of Toxicants on Populations: a Qualitative Approach III. Environmental and Food Chain Pathways	411
FUKADA, M., Applicability of Superhelical Model for Regulation of Gene Expression	431
YOKOYAMA, S., Social Selection in Human Populations: Differential Modification of the Fitness by the Sex of an Affected Parent	453

LETTERS TO THE EDITOR

MIKHALTSEV, I. E., Parametric Neuromorphology	461
ECONOMOS, A. C., The Surface Illusion and the Elastic/Geometric Similarity Paradox, Encore	463
ROGERS, E. F., The Use and Design of Biligand Enzyme Inhibitors	471

Number 4, 21 August 1984

DOUGLAS, J., Hypothetical Entropy-Driven Mechanism for Self-Regulation of the Size and Division of Primitive Cells, Suggesting the Origin and Nature of Mesosomes	475
AYENI, R. O. and AKINRELERE, E. A., On Temperature Factor and the Effect of Viscosity on Blood Temperature in the Arteries	479
STENSETH, N. C., Evolutionarily Stable Strategies in Food Selection Models with Fitness Sets	489
MALPRESS, F. H., A Coulombic Hypothesis of Mitochondrial Oxidative Phosphorylation	501
MALPRESS, F. H., Local Energized Proton Hypotheses of Mitochondrial Oxidative Phosphorylation	523
PAPAGEORGIU, S., A Hierarchical Polar Coordinate Model for Epimorphic Regeneration	533
RICARD, J. and NOAT, G., Enzyme Reactions at the Surface of Living Cells. I. Electric Repulsion of Charged Ligands and Recognition of Signals from the External Milieu	555
RICARD, J. and NOAT, G., Enzyme Reactions at the Surface of Living Cells. II. Destabilization in the Membranes and Conduction of Signals	571
ANNINOS, P., KOKKINIDIS, M. and SKOURAS, A., Noisy Neural Nets Exhibiting Memory Domains	581
SCHWABE, W. W. and CLEWER, A. G., Phyllotaxis—a Simple Computer Model Based on the Theory of a Polarly-Translocated Inhibitor	595
ALEXANDER, R. MCN., Optimum Strengths for Bones Liable to Fatigue and Accidental Fracture	621

Index to Volume 109

- Additive models for dependent cell populations, 127
- AIHARA, K., MATSUMOTO, G. and Ikegaya, Y., Periodic and non-periodic response of a periodically forced Hodgkin-Huxley oscillator, 249
- AKINRELERE, E. A. (see AYENI, R. O.), 479
- ALEXANDER, R. MCN., Optimum strengths for bones liable to fatigue and accidental fracture, 621
- Amino acid translocation, γ -glutamyl transpeptidase-mediated, across the cell membrane, an oscillatory mechanism for, 1
- Anisotropic system, a kinetic Ising model for dynamical behavior of; its significance in streaming phenomena, 373
- ANNINOS, P. and KOKKINIDIS, M., A neural net model for multiple memory domains, 95
- ANNINOS, P., KOKKINIDIS, M. and SKOURAS, A., Noisy neural nets exhibiting memory domains, 581
- Antibody affinity distribution, analysis of the parameter constraints for, 71
- AOKI, K., A quantitative genetic model of two-policy games between relatives, 111
- ARMSTRONG, D. P., Why don't cellular slime molds cheat?, 271
- Arrays, linear and branched, indefinite self-association of a solute in, 285
- Arterial branching, cost of departure from optimality in, 401
- Arteries, on temperature factor and the effect of viscosity on blood temperature in, 479
- AYENI, R. O. and AKINRELERE, E. A., On temperature factor and the effect of viscosity on blood temperature in the arteries, 479
- BIGELOW, D. C. (see ZAMIR, M.), 401
- Biligand enzyme inhibitors, the use and design of (letter), 471
- Binding of specific ligand by linearly associating enzyme system, 59
- Birds and mammals, an explanation of the relationships between mass, metabolic rate and characteristic skeletal length for, 331
- Blood temperature in the arteries, temperature factor and the effect of viscosity on, 479
- Bones liable to fatigue and accidental fracture, optimum strengths for, 621
- Branched and linear arrays, indefinite self-association of a solute in, 285
- Branching, arterial, cost of departure from optimality in, 401
- BROOKS, D. R., LEBLOND, P. H. and CUMMING, D. D., Information and entropy in a simple evolution model, 77
- BRUNI, C., GANDOLFI, A. and GERMANI, A., Analysis of the parameter constraints for a proposed antibody affinity distribution, 71
- Cell membrane, an oscillatory mechanism for the γ -glutamyl transpeptidase-mediated translocation of amino acids across, 1
- Cell patterning in *Xenopus* retina, application of reaction-diffusion models to; initiation of patterns and their biological stability, 299

- Cell populations, dependent, additive models for, 127
- Cells, living, enzyme reactions at the surface of; destabilization in the membranes and conduction of signals, 571
- Cells, living, enzyme reactions at the surface of; electric repulsion of charged ligands and recognition of signals from the external milieu, 555
- Cells, primitive, hypothetical entropy-driven mechanism for self-regulation of the size and division of; suggestion for the nature and origin of mesosomes, 475
- Cellular slime molds, why don't they cheat?, 271
- Cleavage field, holoblastic, a further study of, 41
- CLEWER, A. G. (see SCHWABE, W. W.), 595
- Competition, plant, and the yield-density relationship, 393
- Computer model of phyllotaxis based on the theory of a polarly-translocated inhibitor, 595
- CONWAY, K. (see SHOAF, S. A.), 299
- Cooperativity, hemoglobin, a mathematical treatment of; tension at the heme, 157
- Cost of departure from optimality in arterial branching, 401
- Coulombic hypothesis of mitochondrial oxidative phosphorylation, 501
- CUMMING, D. D. (see BROOKS, D. R.), 77
- DE LUNA, J. T. (see HALLAM, T. G.), 411
- Density-yield relationship, plant competition and, 393
- Destabilization in the membranes and conduction of signals; enzyme reactions at the surface of living cells, 571
- D'HOOGHE, M. C. (see STAUDTE, R. G.), 127
- DOUGLAS, J., Hypothetical entropy-driven mechanism for self-regulation of the size and division of primitive cells, suggesting the origin and nature of mesosomes, 475
- ECONOMOS, A. C., The surface illusion and the elastic/geometric similarity paradox, encore (letter), 463
- Elastic/geometric similarity paradox, encore, and the surface illusion (letter), 463
- Electric repulsion of charged ligands and recognition of signals from the external milieu; enzyme reactions at the surface of living cells, 555
- Encore, the elastic/geometric similarity paradox, and the surface illusion (letter), 463
- Energized proton hypotheses of mitochondrial oxidative phosphorylation, 523
- Entropy and information in a simple evolution model, 77
- Entropy-driven mechanism, hypothetical, for self-regulation of the size and division of primitive cells, suggesting the origin and nature of mesosomes, 475
- Environmental and food chain pathways; a qualitative approach to the effects of toxicants on populations, 411
- Enzyme inhibitors, biligand, the use and design of (letter), 471
- Enzyme reactions at the surface of living cells. Destabilization in the membranes and conduction of signals, 571
- Enzyme reactions at the surface of living cells. Electric repulsion of charged ligands and recognition of signals from the external milieu, 555
- Enzyme system, linearly associating, binding of specific ligand by, 59
- Epimorphic regeneration, a hierarchical polar coordinate model for, 533
- Evolution, asymmetrical, specific-mate recognition systems and phylogenies, 147

- Evolution model, information and entropy in, 77
- Evolutionarily stable strategies in food selection models with fitness tests, 489
- Fiberstresses of the prolate spheroid; myocardial stress equations, 191
- Fitness, differential modification of, by the sex of an affected parent; social selection in human populations, 453
- Food chain pathways and the effects of toxicants on populations; a qualitative approach, 411
- Food selection models, evolutionarily stable strategies in, with fitness sets, 489
- FRASIER, C. C., An explanation of the relationship between mass, metabolic rate and characteristic skeletal length for birds and mammals, 331
